-I- CATALYTIC ACTIVITY: N-acetyl-T-glutamate 5-semialdehyde + NAI + phosphate - N-acetyl-5-glutamyl phosphate + NADPH.
-I- PATHANY: THIND STEP IN ARGININE BIOSYNTHESIS.
-I- SIMILARITY: BELONGS TO THE NAGSA DEHYDROGENASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Baciilus halodurans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 XFFXXXSSSSSSSSSSSSSSSSSSSSSSSSSSSSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the csequence represented in AAW3139 and is used in an assay to monitor CC ligand binding to the G protein-coupied receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pitultary function CC modulator. A central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementa, depression, hyperkinetic CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, cC trauma, growth hormone secretory disease, hyper- and polyphagla, CC hyperlipideemia, hypercholesterolaemia, hypercraticis, renal disease, hyperrolaetinemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinai injury, cransient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, CC acute myocardial infarction, infertility, spinocerebellar degeneration, conjugalactia. Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes a represent for modulating prolactin secretion which comprises a contract polypeptide or a sait, for a g protein coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, spenecyst cacogenesis, menopausal cyndrome, enthyroid or hypometabolism. They can by used for promoting contraction in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing contributing prolactin secretion can be used for treating or preventing continuates an aphrodisiac. The agents for conficting infertility, impotence, amenorabea, galactorabea, conficting prolacting can also be used as contraceptives. The agents for modulating placental function can be used as contraceptives. The agents for controcarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abortion to the contraceptive fetus, because the contraceptives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The invention provides a monocional antibody which has a specific reaction with the part peptide of the C-terminal of 1982 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pitultary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences ANY49290-302 represent peptide fragments of the 1992 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its sait for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta,

                                                                                                      밁
                                                                                                                                                                                                                                                                 The present invention describes a modified therapeutic peptide (I) CC comprising a therapeutically active amino acid region (III) and a creative group (II) (e.g. succinimidyl and maisimido groupa) attached to creative group (II) (e.g. succinimidyl and maisimido groupa) attached to compose a therapeutically active amino acid region (IV), which covalently common the peptides of 3-50 amino acids. CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotranamitters, to protect them from peptidase activity cin vivo for the treatment of various disorders. Endogenous therapeutic peptides are not aultable as drug candidates as they require frequent composed of aministration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of poptidases to increase length of activity (half ife) and specificity as bonding to large molecules decreases contraccilular uptake and interference with physiological processes. AABB0829 to AAB92441 represent peptides which can be used in the contractive contraction of the present invention.

                                                                                                                                                                                                                                                                                        cc ligand polypeptide corresponding to amino acid residues 34 to 54 of the caequence represented in AAW31390 and is used in an assay to monitor collegand binding to the G protein-coupled receptor protein. Pharmacoutlosi compositions containing this ligand may be used as a pituitary function comodulator. A central nervous system modulator or a pancreatic function comodulator. This ligand could have specific applications as a protein couple of the respective agent for dementia, depression, hyperkinetic grandome, disturbance of consciousness, anxiety syndrome, schizophrenia, ctrauma, growth hormone secretory disease, hyper-and polyphagia, ctrauma, growth hormone secretory disease, hyper-and polyphagia, ctrauma, growth hormone secretory disease, hyper-and disease, comperilipidaemia, hypergrolactinaemia, disbetes, cancer, pancreatitis, renal disease, curvers's syndrome, neurosis, aathma, rheumatoid arthritis, spinal injury, ctranslent brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebeiiar degeneration, coligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting cativation of the G protein-coupled receptor protein.
                                                                                                                                                                                    Best Local Similarity 88.9

It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, terrilaration or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; concessrean section; artificial fertilization; galactostasis; goat; pig;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence represented in AAW31390 and is used in an assay to monitor colligions binding to the G protein coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function composition. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic cyndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, comparing the hormone secretory disease, hyper- and polyphagia, hyperkinetic compounds which are compounds which are compounds which are controlled to screen compounds which are controlled to screen compounds which are controlled to screen compounds which are

It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
         disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The
                                  diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's
                                                              The present sequence describes a method of controlling the secretion corticotrophin releasing hormone (CRH), involving the use of a G protreceptor ligand. This can be used to control the secretion of CRH and useful as an analgesic or for treating, preventing or ameliorating
                                                                                                                                                                            Use of G

     This sequence represents a peptide fragment from a novel human type caligned polypeptide corresponding to main acid residues 23 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, Schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, courosis, asthma, rheumatoid arthrititis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinoccrebeliar degeneration, coppelle of altering the binding activity of the ligand affecting activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 15
   This is the amino acid sequence of the human pituitary G
CP protein coupled receptor ligand 1992L. A method suitable for
CC commercial high-level production of 1992L comprises expressing
CC the ligand in host cells as a recombinant fusion protein e.g. with
CC been modified to include an N-terminal cysteine residue. The
CC cigand is released from the fusion by cyanylation followed by
CC ammonolysis. 1992L has prolactin secretion-stimulating and (at
C1)4h doses) prolactin secretion-inhibiting properties. It can be
C2 used in the treatment and prevention of various diseases including:
CC seniie dementla, cerebrovascular dementla, and dementia associated
CC vith: genealogical disorders (e.g. Alzheimer's disease, Parkinson's
CC disease, Pick's disease, Huntington's disease), infectious diseases
CC (e.g. Creutzfeldt-Takob's), endocrine or metabolic disease or
CC intoxication by drugs, metal and organic compounds), tumourigenic
CC diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
CC diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
CC diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
CC diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
CC diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
CC diseases (e.g. brain tumour), traumatic diseases (e.g. chronic
CC diseases associated with prolactin hypo and hyperseretion
CC diseases associated with prolactin hypo and hyperseretion
CC disease associated with prolactin hypo and hyperseretion
CC disease associated with prolactin hypo and brainant disease
CC (hypersecretion disease)
CC (hypersecretion disease)
